PROJECTS

Reinforcement Learning – BipedalWalker (TD3 & TD3-FORK) | PyTorch, Gymnasium, CUDA

🔗 GitHub

- Implemented TD3 from scratch in PyTorch (replay buffer, twin critics, actor, Polyak target updates) with no RL library dependencies; trained on BipedalWalker-v3 to avg reward **+280/300** in **1M steps** on personal GPU.
- Built a live **6-panel** Matplotlib training dashboard (reward curves, Q-value drift, action distributions, TD error) and a threaded **pygame** render window with HUD overlay displaying training in real time without blocking the training loop.
- Extended the agent with TD3-FORK (forward dynamics model predicting next state from current state-action) to address long-horizon credit assignment failure on BipedalWalkerHardcore-v3; reward improved from **-40 to +100+** within **900k steps**.

Placement Tracker Platform (Full-Stack Features & Data Pipelines) | TypeScript, Svelte, SQLite3

🔗 GitHub

- Engineered granular placement tracking and shortlisting pipelines using **Svelte** and **SQLite**.
- Architected data import pipelines processing **15,000+** student and company records via **TypeScript** scripts, ensuring robust **data integrity and mapping accuracy**.
- Executed a structural database migration from legacy student IDs to a unified **NeoID** architecture, implementing efficient SQL joins and pagination to slash query latency from **2000ms to 50ms**.

HackHub Game – OctoRhythm | Godot, GDScript

🔗 GitHub

- Developed OctoRhythm, a rhythm-based game for HackHub 2025 using the Godot engine and GDScript.
- Designed timing-based scoring and dynamic difficulty adjustment to enhance player engagement.
- Created and integrated sprites and animations, ensuring a cohesive visual style.
- Collaborated with a team to optimize performance and troubleshoot issues for a stable release.
