- Created and integrated assets such as sprites and animations, ensuring a cohesive visual style.
- Collaborated with a team to optimize game performance and troubleshoot issues, leading to a stable release.

Image Denoising Autoencoder

- Built a hybrid Inception-ResNet denoising autoencoder in TensorFlow/Keras trained on DIV2K, using Inception blocks (1×1, 3×3, 5×5 branches) and stacked ResNet residual blocks across a 3-stage encoder.
- Implemented a U-Net style decoder with skip connections and mixed-precision training (float16 activations) to preserve spatial detail while halving activation VRAM consumption.
- Engineered a memory-efficient pipeline using a custom Keras **Sequence** generator for on-the-fly noise augmentation across 5000 training patches extracted from 800 source images.
